

HireHelper: On-Demand Task Assistance Application

Project Statement:

Hire-a-Helper is a platform where users can hire individuals to perform specific tasks. The application allows users to post tasks, browse tasks posted by others, send or receive help and manage ongoing and completed tasks. The app facilitates seamless hiring and coordination between task creators and helpers while offering real-time updates, profile management, and notification features.

Outcomes

1. Users register or log in, followed by email-based OTP verification.
2. Users are directed to a dashboard with access to key features.
3. Users can post new tasks by providing all required details.
4. Users can browse the feed to request available tasks.
5. Task creators receive notifications when someone requests their tasks.
6. Users can manage personal settings and profile information.

Modules

- **Module A:** Authentication & Profile Management
- **Module B:** Task Posting & Discovery
- **Module C:** Request Handling & Notifications
- **Module D:** Dashboard & Navigation

Milestone 1: Weeks 1-2 – Authentication & Dashboard Setup

- Implement login and registration system.
- Add OTP email verification after sign-up/login.
- Design and build dashboard layout.
- Include sidebar with links to:
 - Feed
 - My Tasks
 - Requests
 - My Requests
 - Add Task
 - Settings

Output:

- User **authentication screens**.

- OTP verification system.
- **Feed** and **sidebar** navigation screen.

Milestone 2: Weeks 3-4 – Task Management

- Develop task creation form (title, description, location, start time, end time (optional), picture).
- Build functionality for users to view their created tasks.
- Design feed to display tasks created by other users.
- Add “Request” button for each task in the feed.

Output:

- **Add Task** form page.
- **My Tasks** screen.

Milestone 3: Weeks 5-6 – Requests & Notifications

- Enable users to send requests for available tasks.
- Create Requests page showing requests received for user’s tasks.
- Create My Requests page showing all request sent by you to help.
- Implement notification system for task owners on receiving a request.
- Establish database linkage between task owners and helpers.

Output:

- **Requests** screen for task creators.
- **My Request** screen to see your requests
- Task request functionality and logic.
- In-app notifications.

Milestone 4: Weeks 7-8 – Profile & Final Touches

- Implement Settings page for updating name, email, phone, and profile picture.
- Polish all UI flows and ensure integration.
- Perform full feature testing and bug fixing.
- Finalize documentation and prepare the presentation.

Output:

- **Settings** screen.

- Final app walk-through.
- Project report and presentation slides.

Database Schema:

1. User

- id: Unique UUID of the user
- first_name: First name of the user
- last_name: Last name of the user
- phone_number: Contact number
- email_id: Email address
- password: Encrypted password
- profile_picture: URL or file path to profile image

2. Task

- id: Unique task identifier
- user_id: Reference to creator (User.id)
- title: Title of the task
- description: Details about the task
- location: Where the task is to be done
- start_time: When the task begins
- end_time: Optional end time
- status: Current task state
- picture: Optional image of task

3. AcceptedTasks

- user_id: UUID of the helper
- task_id: UUID of the task
- status: Status of the request (accepted/pending/completed)

4. Requests

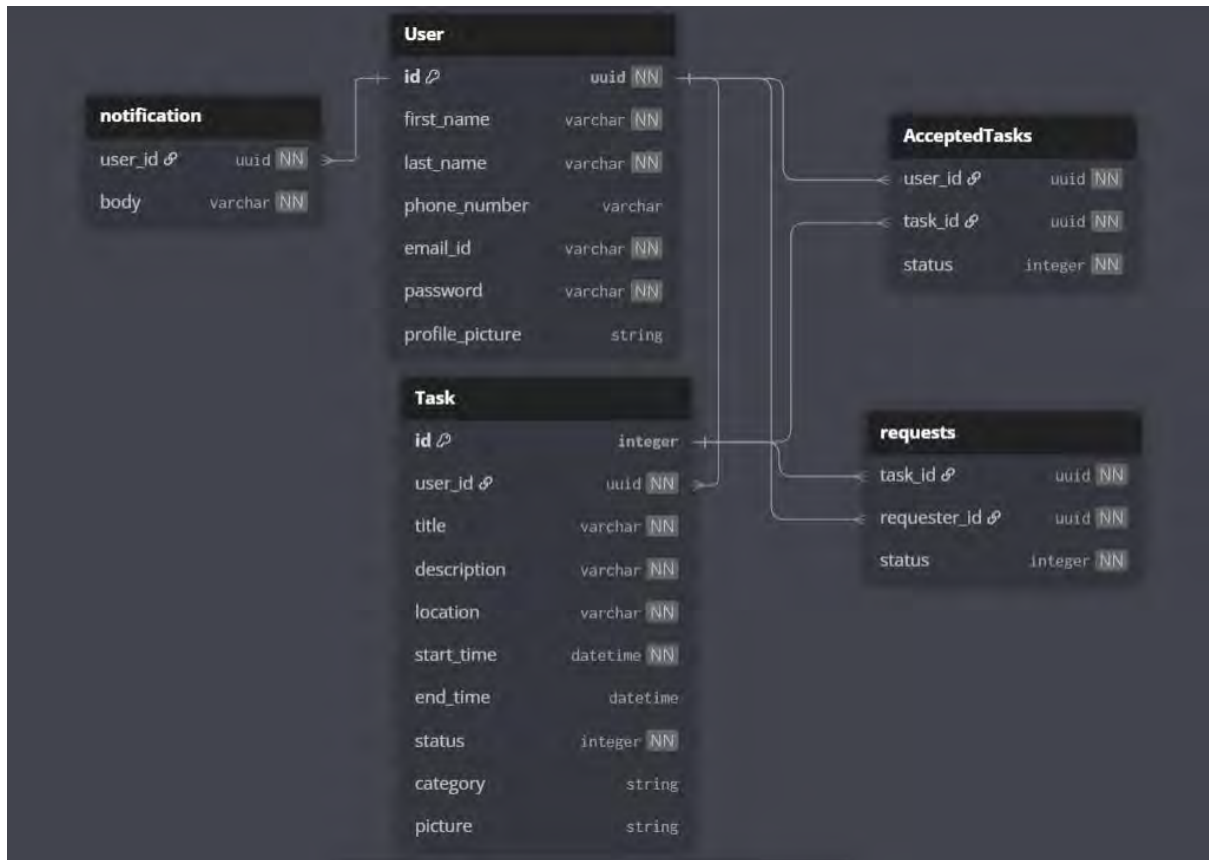

- task_id: UUID of the task being requested
- requester_id: UUID of the user making the request
- status: Status of the request (e.g., pending, accepted, rejected)

5. Notification

- user_id: UUID of the user receiving the notification

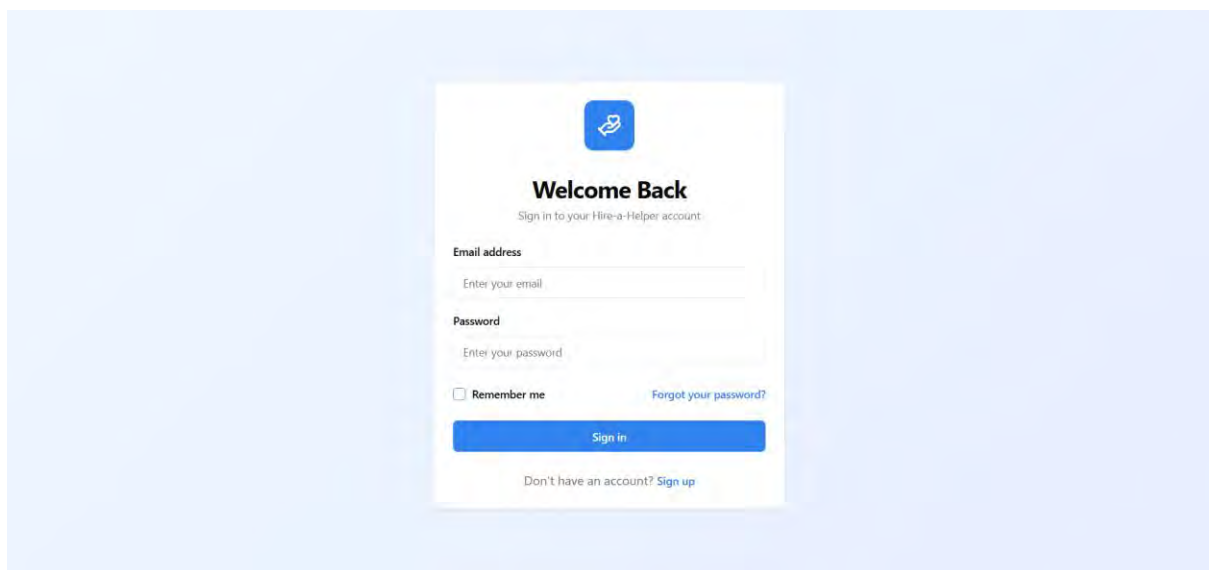

- body: Text of the notification message
